Professional Summary

Senior Software Engineer with 6+ years shipping full-stack SaaS in TypeScript, React, Node.js, PHP, Python and C# from API and data layers to accessible, production-grade UIs that over 250k WPML users and stakeholders rely on daily. Re-engineered customer-facing REST APIs for 20% faster response times, shipped data-driven billing and AI-assisted diagnostic features that cut average support triage from 1 day to 2 hours and kept production releases reliable through automated testing and CI/CD. Deputy team lead who multiplies a team's output through championing clear documentation, clean architecture, automated testing, code review and mentorship.

Technical Skills

Languages: JavaScript, TypeScript, PHP, Ruby, Python, SQL, C#

Frontend: React, Next.js, Redux, Angular, HTML5, CSS3, SCSS, Tailwind CSS

Backend: Node.js, Express.js, Ruby on Rails, REST APIs, GraphQL, WebSockets, Real-Time / Streaming, API Design, Authentication, Authorization, .NET

AI & LLM Integration: LLM & ChatGPT API Integration, Semantic Classification, RAG-Style Solution Matching, AI-Assisted Workflows

Databases: MongoDB, PostgreSQL, MySQL, SQL Server, Elasticsearch, Query Optimization

Cloud & DevOps: Git, GitHub Actions, Kubernetes, Grafana, Terraform, Azure, CI/CD, Docker, AWS (EC2, S3, Lambda), Google Cloud Platform (GCP)

Testing: Jest, Cypress, Playwright, Codeception, Unit Testing, Integration Testing, End-to-End (E2E) Testing

Engineering Practices: System Design, Software Architecture, Agile/Scrum, Code Reviews, Technical Mentorship, Accessibility (WCAG)

Professional Experience

OnTheGoSystems — Las Vegas, NV

Senior Software Engineer, Deputy Team Lead

Jan 2023 — Present

- Direct full-stack delivery across TypeScript, React, Node.js Python and C# by owning architecture, code quality and execution from API and data layers through production UIs.
- Designed and shipped an AI-first self-service support wizard (React/TypeScript) where ChatGPT produces structured issue summaries with semantic classification and keyword-driven documentation retrieval, paired with parsed environment debug checks on the bug path, cutting average customer triage from 1 day to 2 hours and improving solution-match accuracy by 45%.
- Re-engineered REST and GraphQL API endpoints and database queries across Node.js, Python and C# backends that **dropped average API response times by 20%** on customer-facing SaaS features.
- Built and maintained scheduled and background jobs including cron-driven customer email notifications, CI/CD pipeline jobs and automated test-suite runs to automate recurring workflows and keep releases reliable without manual intervention.
- Refactored service and data-access layers in TypeScript and C#, eliminating duplicated logic and introducing reusable patterns that accelerated feature delivery and drove regressions down to a few escaped defects per release.

- Led end-to-end delivery of WPML's real-time translation cost and word-count billing summary feature across the React/TypeScript frontend and Python backend which **dropped cost-related support tickets and refunds by ~25%**.
- Drove WCAG/EAA accessibility remediation across 4 React-based SaaS products, standardizing keyboard navigation and screen-reader support and **cutting critical accessibility defects by 50%** before the compliance deadline.
- Set technical direction across React, TypeScript, Node.js PHP, Python and C# by standardizing engineering decisions across teams with different stacks and release cadences to unblock cross-team delivery.
- Mentored engineers and run daily morning code reviews which **holds review turnaround to ~1 day** preventing blockers while strengthening team standards in API design, testing and SOLID principles.
- Translated ambiguous product, infrastructure and support requirements into scalable, well-tested production releases which helped low-risk delivery through early cross-functional alignment.
- Improved delivery predictability to a **~75% on-time release rate** from a previously inconsistent baseline by sharpening estimation, backlog refinement and release planning across Agile sprints.

OnTheGoSystems — Las Vegas, NV

Software Engineer

Feb 2021 — Dec 2022

- **Cut new-developer onboarding and ramp-up time by ~50%** by authoring product-specific engineering documentation covering architecture, reusable React/TypeScript patterns and common implementation pitfalls.
- Raised release quality by building and maintaining unit, integration and end-to-end (E2E) test suites with Jest, Cypress, Playwright and Codeception across critical product workflows.
- Delivered accessible, pixel-accurate React and TypeScript frontend features from design specs, ensuring responsive, cross-browser behavior and reliable user experiences.
- Strengthened long-term maintainability by documenting reusable engineering patterns and raising implementation consistency across design, frontend and backend teams.
- Collaborated cross-functionally with product and support to ship improvements that reduced user friction and lowered operational support burden.

Sysnet Software Solutions — Abuja

Full-Stack Engineering Intern

Jan 2020 — Dec 2020

- Built and maintained responsive full-stack web applications for government platforms using React, JavaScript, SCSS, PHP and SQL-backed systems.
- Delivered accessible, responsive, cross-browser public-facing applications in close partnership with UI/UX and backend engineers.
- Diagnosed and resolved critical UX and performance bugs, improving site reliability and user satisfaction.
- Streamlined deployments and version control with Git and helped establish early-stage CI/CD workflows.
- Developed backend logic, database interactions and API integrations across end-to-end application workflows.

Projects

CampusFit — Full-Stack Fitness Tracking Web App

Tech Stack: React, TypeScript, Express, Node.js, PostgreSQL, Supabase, JWT

- Built CampusFit with a TypeScript REST API on Express with JWT access and refresh-token rotation, HttpOnly/Secure cookies and bcrypt hashing.
- Modeled a relational PostgreSQL schema (users, goals, activities, challenges) with foreign keys and Row-Level Security, adding covering indexes on foreign-key and date columns to match the API's read patterns.
- Added tiered, per-endpoint rate limiting with standard rate-limit headers and designed a versioned API with a consistent response/error envelope and pagination, documented in a full API reference.

Real-Time Multilingual Captioning for WebRTC: A Study of Latency, Quality and ASR Error Propagation

Tech Stack: React, TypeScript, WebRTC, REST APIs, Google Cloud Platform (GCP)

- Built and deployed a real-time multilingual captioning system for WebRTC on Google Cloud Platform (GCP), with a local TypeScript build for development, optimizing speech-to-text latency, translation latency and rendering performance.
- Achieved **~21ms average speech-to-text latency and 123ms translation latency** through fine-grained performance measurement.
- Sustained **95% accuracy under noisy conditions**, outperforming peer systems in captioning quality and responsiveness.

Education

Master of Science, Applied Computer Science (Hons)

Grand Valley State University — Grand Rapids, MI

Apr 2026

Bachelor of Science, Computer Science

Afe Babalola University — Ekiti State, Nigeria

Jun 2019

Certifications

Complete Web Developer — ZTM Academy (May 2025)

React — TestDome (Jan 2021)
